Machine suitable to accumulate synthetic fibers, from 5000 to 120.000 denier, directly from the extruder on a movable drum.

Suitable to feed twisters model GS and T4TR-E in line with the extruder and equipped with protection device.

With an improved designed it occupies less space than the previous series, but with an enlarged capacity of 1621 meters.

The big drum-like structure where the yarn is accumulated allows to keep its tenacity and brightness unchanged.

A new electric system controls the yarn tension avoiding an eventual break. In this way there is no need of intervention or control of the operator.

TECHNICAL DATA		
Description	Unit	Data
Denier Range	Denier	2800
Useful take-up length on movable drum	mm	1600
Speed	Meter/ Minute	250 max
Energy consumption MAX	kW	1,3
